ULTIMATE OVERLAND PRODUCTS

270° SHADOW AWNING

For seasoned campers, an awning is very often the first accessory they bolt to their vehicle, knowing that the ability to cast as much shade as possible (in the quickest time) is crucial to overland travel. What you don't want is to be battling with poles, pegs and guy ropes in blistering midday heat, or when rain is thundering down.

Our globally popular **270° Shadow Awning** is designed to open, and setup, all in one. There are no additional steps or poles to pitch; you just unzip the bag and swing the awning through a full 270°. It's so easy, one person can manage it.

This wrap-around effect means that you get to enjoy 10 square metres of shelter around the full working area of your vehicle, especially where it's needed – at the rear, where your drawer system, fridge, and supplies are stored.

The awning features four heavy-duty aluminium arms that span the 270° spread, making the Shadow Awning resistant to inclement weather. If conditions happen to get worse, the awning's centre arm features a tucked away drop-down pole that can be used to brace the awning for extra support. What's more, each of the four arms boasts a tie-down strap for really gusty conditions.

Lastly, because the 270° Shadow Awning is made from reflective ripstop material, the awning casts a noticeably lower-shade temperature.

SHADOW AWNING SIDE WALL KIT

A great accessory to the 270° Shadow Awning is the Side Wall Kit.

Once you have set up your awning, you now have the option to attach sides. Although not used as a ground sleeping area, this Side Wall Kit expands your camping area allowing you to set up your eating area, chairs and more.

The walls are easily attached with velcro to the top of the Shadow Awning, as well as attached with velcro around the two extra support poles. It has three windows and one door. Our sides are made from 240g ripblock fabric, this Side Wall Kit acts as a strong barrier to the elements, keeping you warm and safe in your Alu-Cab home.

STORM KIT

Alu-Cab has developed a new extra accessory that is compatible with all our Awnings, called the Storm Tie Down Kit.

The Kit has been designed for 2 main purposes, the first being additional anchorage in strong winds and stormy conditions, to better stabilise the Awning. The second is to prevent water pooling on the Shadow Awning canvas, which can cause sagging, instability and sub-optimal operation. It is easy and quick to setup/take down, as well as being small and light for transport/storage. A very simple and effective extra for our Awning Range.

180° AWNING

Introducing a new awning to the Alu-Cab Shadow Awning range, the **180° Shadow Awning**. Once open this free standing awning folds out to be parallel with your vehicle, allowing access to the rear of your vehicle, where your drawer system, fridge, and supplies are stored. There are no additional steps or poles to pitch; you just unzip the bag and swing the awning through a 180°. It's so easy, one person can manage it.

With our 270° Shadow Awning being one of our proudest products that's all out #DesertProof and Africa-proven. It goes without saying that the new 180° will share the same strength, durability and quality you are used to. The 180° Shadow Awning is made from reflective ripstop material which assists in casting a noticeably lower-shade temperature.

For seasoned campers, an awning is very often the first accessory they bolt to their vehicle, knowing that the ability to cast as much shade as possible (in the quickest time) is crucial to overland travel. For inclement weather the guy ropes should be used to prevent pooling of water on the canvas and to guide water runoff in preferred places.

2M 270° AWNING

Introducing the **2m 270° Shadow Awning**, which is just a tad shorter than our standard 270° Shadow Awning, allowing for applications that needs a smaller awning to also cast shade while adventuring. It's so easy, one person can manage it.

For seasoned campers, an awning is very often the first accessory they bolt to their vehicle, knowing that the ability to cast as much shade as possible (in the quickest time) is crucial to overland travel. This wrap-around effect means that you get to enjoy 6.1 square metres of shelter around the full working area of your vehicle, especially where it's needed – at the rear, where your drawer system, fridge, and supplies are stored.

The 2 m 270° Shadow Awning is made from reflective ripstop material which assists in casting a noticeably lower-shade temperature. Without a doubt, the Alu-Cab 2m 270° Shadow Awning is one of our proudest products that's all out #DesertProof and Africa-proven.

GUTTER KIT

A must have addition for the adventurer who find themselves using the Shadow Awning in all types of conditions is the Gutter Kit. This kit enables one to close the gap between the vehicle and awning, this way further sealing the user from those stormy conditions.

***Only compatible with the 270° Shadow Awning**
